Positioning statement

<i>For / Who</i>	For c-suite and key decision-makers seeking to unlock new market opportunities, maximise their efficiency and ultimately improve patient outcomes .
<i>OneRoche ID is the</i>	Most comprehensive, reliable and trusted ID solution partner of choice now and for the future
<i>Versus</i>	Multiple players in the ID market with a myriad of complex, fragmented and inconsistent solutions
<i>That</i>	Builds long-term, collaborative partnerships and is committed to continuous scientific innovation , with comprehensive, competitive and unique ID solutions to meet the needs of customers, partners and patients navigating the complex ID landscape
<i>Because</i>	We improve patient lives: We are driven by a patient-centric mindset; focusing on the comprehensive portfolio and diagnostic innovations that strive to maximize medical value and meets the needs of those affected by diseases with the greatest global impact; helping to address public health inequalities across the entire patient journey. We optimise and simplify: From the lab to point of care, we boost efficiency in centralised and decentralised settings, providing a holistic ID portfolio across throughput levels. Our integrated solutions can consolidate ID testing with our cutting-edge automation and modularity offering the flexibility and scalability to maximise capabilities, where needed, today and in the future. We help customers get ahead: With integrity and innovation at our core, we strive to be the partner of choice, consulting with partners to help them optimise, prepare for future pandemics, and get ahead so they can compete and simplify complexities in the ever-changing ID landscape
<i>So that</i>	Customers are enabled to provide for the people who count on them; driving better public health outcomes at lower cost to health systems and society , improving patients' quality of life , and helping in the fight against ID globally

MC--12149

Value proposition

OneRoche ID is the trusted and reliable partner of choice for c-suite and key decision-makers in diagnostic testing that is committed to continuous innovation and holistic ID solutions that benefit all patients and customers.

[Because] Our comprehensive portfolio has the flexibility to meet each partner's needs; strives to maximise medical value, improving efficiency and unlocking new opportunities so that they can continue to improve public health and the lives of patients in the fight for eradicating infectious diseases globally.

MC--12149

Vision statement

*The Roche infectious disease **comprehensive portfolio** unlocks new opportunities with built in flexibility to:*

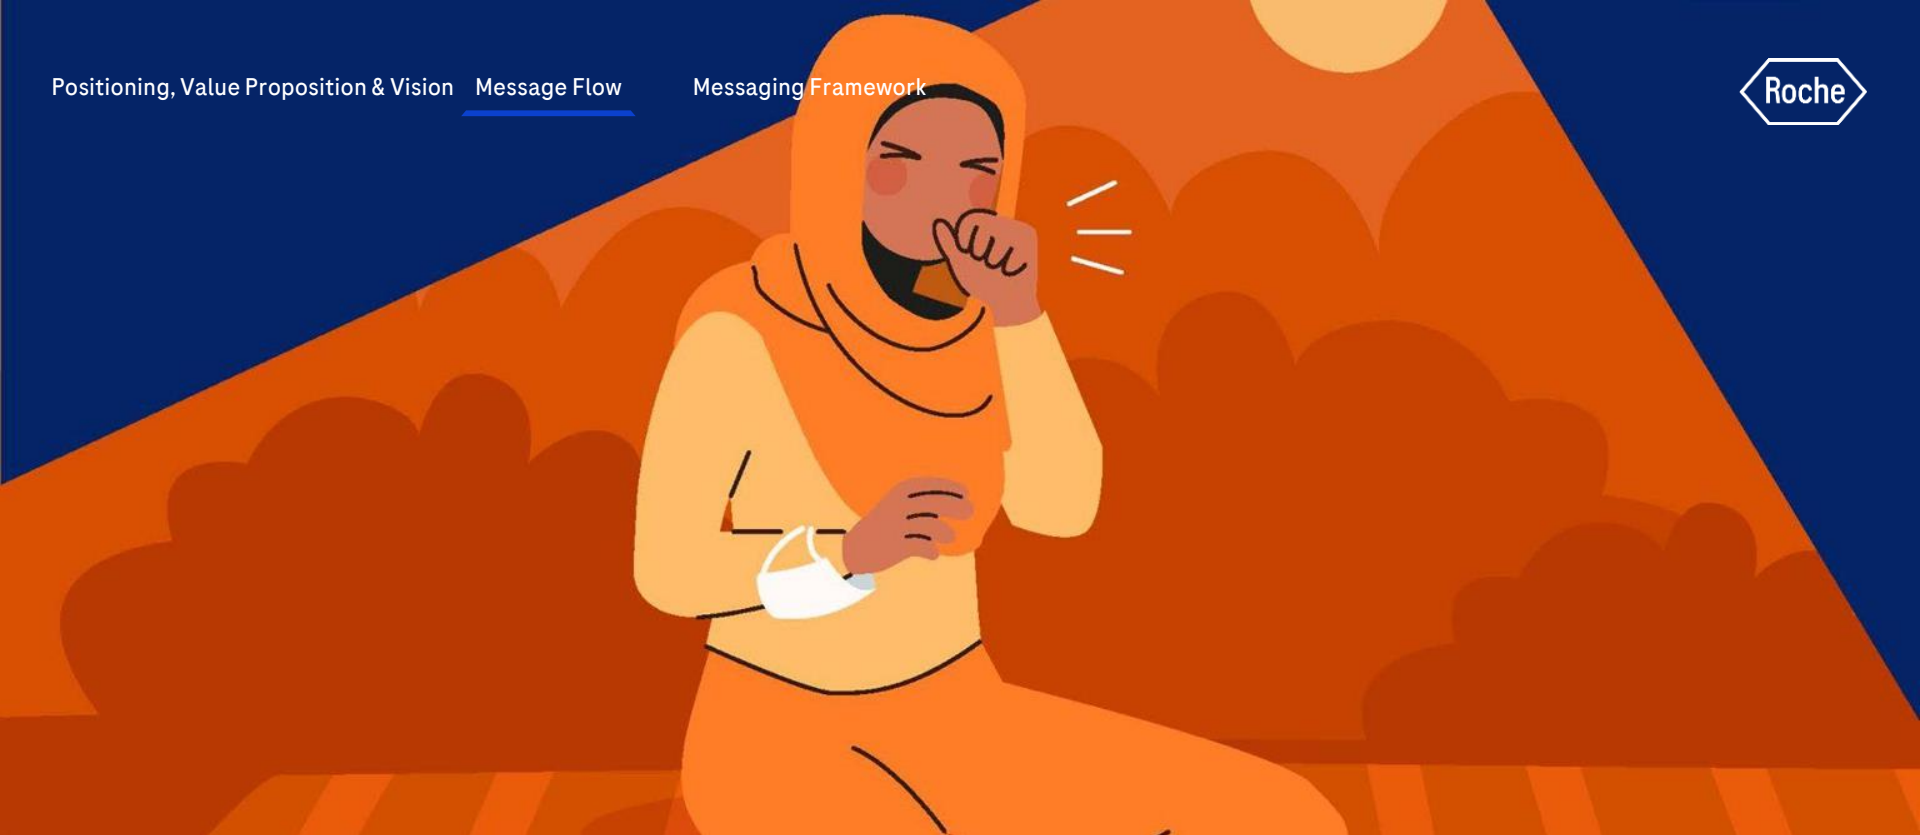

- *meet each **partner's needs**;*
- *strive to maximize **medical value**;*
- *and improve **efficiency**,*

so that together we can continue to improve public health and the lives of patients everywhere.

Together, we can fight for eradicating infectious diseases globally.

MC--12149

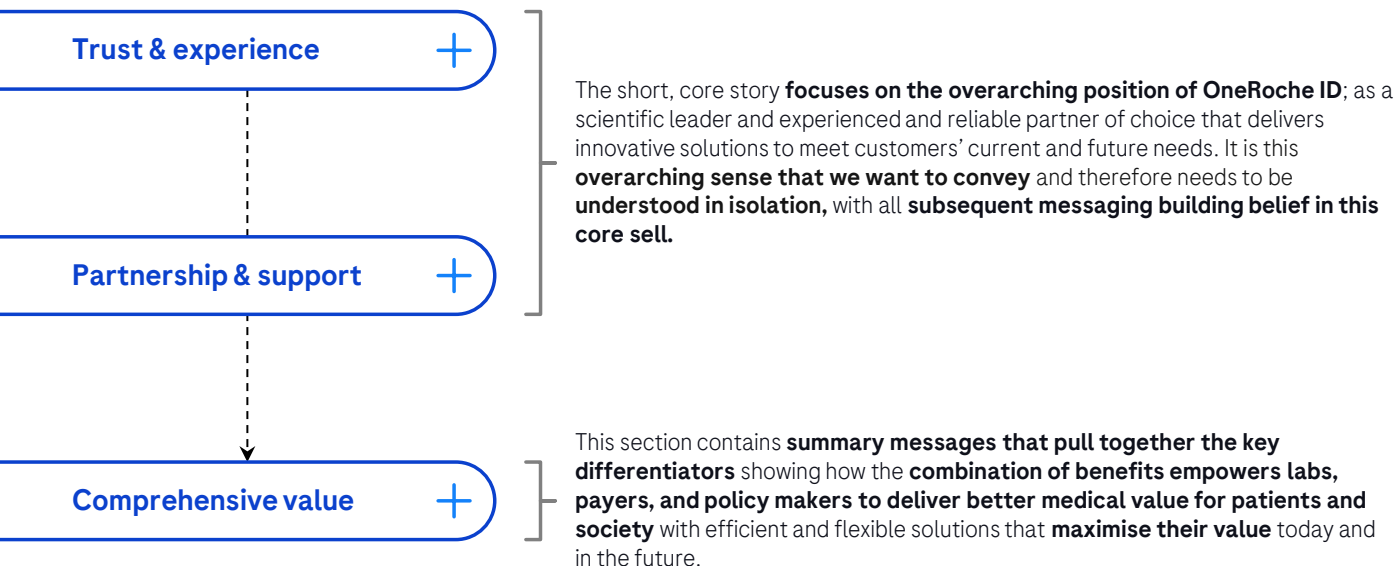

Message flow

MC--12149

Short story message flow

The short story ties into the “for”, “is” and “that” statements from our value proposition, setting out exactly are we offering and summarising what we do better than anyone else.

Key themes and message flow

Trust & experience

Partnership & support

Comprehensive value

History of innovation

Open with a clear picture of **Roche Diagnostics' long history as a scientific leader and innovator** in the ID diagnostic space. **Scientific Expertise:** Highlight key **'firsts' and ongoing scientific collaborations** to demonstrate Roche's extensive and enduring track record of delivering innovative ID solutions.

Global footprint

Speak to the **expansive global presence and large existing supply base** to reinforce that Roche has the reach and capacity to be a reliable partner.

Sustainable solutions

Focuses on a commitment to a **sustainable future for diagnostics**, reducing the environmental impact and ensuring societal and economic sustainability.

Key themes and message flow

Trust & experience

Partnership & support

Comprehensive value

Partnership

Emphasising Roche's position as a **'collaborative partner'** rather than a **'transactional supplier'**, **working with labs** to deliver solutions that meet their needs.

Consultancy

Highlight ability for **technical and healthcare consultancy**, with support ranging from finding an **optimal configuration to improving operational efficiency**.

Post-sales support

Speak to **rapid technical** support to keep the labs running and **scientific/educational** support to help them stay ahead of the curve.

Global outlook

Messages focuses on key **global partnerships in both the Global Access Program and the Global Fund**, focusing heavily on partnerships/collaboration.

MC--12149

Key themes and message flow

Trust & experience

Partnership & support

Comprehensive value

Patient value

Summarises **increased medical value**, speaking to a **comprehensive menu** with **fast and accurate results** across the **continuum of care** (self-tests, POC, lab etc.).

Operational value

Summarises **increased value for labs** with the **flexibility and efficiency** to meet each customers' needs, speaking to **solution breadth, integration and automation**.

Investment & future-value

Finish with a **message of continued commitment to ID**; in investment and menu expansion that will strive to **maximise value today and into the future**.

Short story

Long story

Long story message flow

Trust & experience

Partnership & support

Comprehensive value

Patient-centric

Solutions for all settings

Crisis-readiness

The long story still opens with our short story messages that **focus on the overarching position of OneRoche ID.**

We still follow the core propositions with messaging that speaks to a broader, overarching sense of value that only OneRoche can provide with the 'Comprehensive Value' **summary messages pulling together the key themes** that are then **broken down into more detail in the subsequent buckets.**

The long story provides much **more detail on our key reasons to believe.** The flow is designed to keep the goal of **improving patients' lives at the forefront** with more functional themes but **always laddering back to the core idea of meeting patients' needs** today and in the future. This section is **designed to be flexible, allowing a more tailored story** with increased prominence on the themes that will resonate most with a given customer/market.

Messages will **include key details on differentiators** such as scalability, integration and consolidation, as well as powerful case studies like the COVID-19 response. Content will be **kept high level** and **avoid straying into product-specific messaging.**

MC--12149

The additional elements of the long story work on the “*because*” and “*so that*” statements from our value proposition, and provide the opportunity to qualify our claims by connecting our ultimate benefit to the bigger picture of our audiences' needs.

Key themes and message flow

Patient-centric —

Solutions for all settings +

Crisis-readiness +

Improved patient experience

Focus on giving **patients fast, reliable, and accurate diagnoses** without the fear of misdiagnosis or the need for retests/redraws.

Better patient care

Highlight the **high coverage of key ID indications and improved care with assays that support and enhance clinical decisions**. Finish by highlighting Roche's **commitment to an extensive menu expansion**.

Global access

Utilise the **great example of the Roche Global Access Program** to show the strong commitment to **supporting the fight against ID in LMIC**.

Key themes and message flow

Patient-centric

Solutions for all settings

Crisis-readiness

Systems portfolio

Speak to the systems at various **throughput** levels, cutting-edge automation and **modular approaches that enable labs to scale** as their needs change.

Automation, consolidation & integration

Cover solutions that can boost efficiency, both within labs with the **serum work area (SWA) and molecular work area (MWA)** and at the bedside with rapid and **automated point-of-care solutions**.

Digital integration

Focus on **data solutions that enable powerful, actionable insights into performance**.

Key themes and message flow

Patient-centric

Solutions for all settings

Crisis-readiness

Outbreak expertise

Highlight key examples of **crisis readiness**, and reassure that we have the **innovative solutions to rapidly respond to any future emergency**.

COVID-19 solutions

Focus on the **speed and breadth of COVID-19 diagnostics solutions** developed across divisions, with assays that cover the entire patient journey.

COVID-19 response & infrastructure

Focus on the **robust response** from extra investment, rapid infrastructure expansion and ability to deliver tests despite global supply pressures.

Messaging Framework

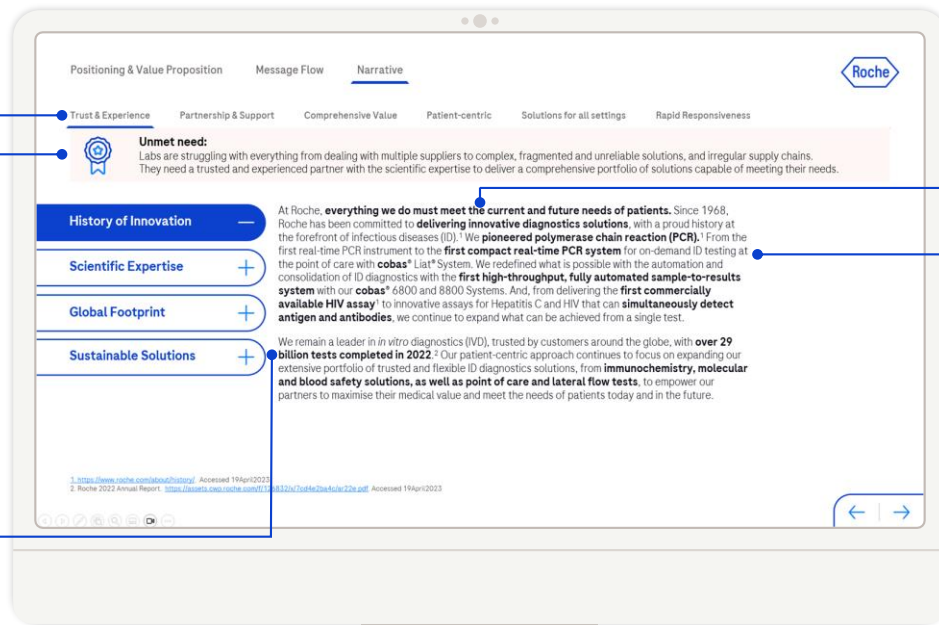

MC--12149

Example message grid

This is an example of how the messages build out from the key themes. We recommend that the 'core story' key themes follow a more consistent narrative arc, with the 'long story' messages offering the flexibility to create a more detailed story that speaks to each market and audience.

We include a short "unmet need" statement for each key area. This isn't part of the narrative but acts as a guide to ensure we are always keeping our customers' needs front of mind

In some messages, we have included a key statistic, metric or example to provide more tangible support for the message.

Each message includes a short headline to summarise its content. They can be used within the narrative to provide additional structure or act as the starting point for headlines or subheads in the assets created from this narrative.

The messages are above the product level, setting out an overarching aspiration/vision of the OneRoche ID offering that helps ensure more unified messaging closer to the product level. While the messages may not be customer facing, they should still be well supported wherever possible to ensure that they remain ownable and differentiating.

Responsiveness**Unmet need:**

Labs are struggling with everything from dealing with multiple suppliers to complex, fragmented and unreliable solutions, and irregular supply chains. They need a trusted and experienced partner with the scientific expertise to deliver a comprehensive portfolio of solutions capable of meeting their needs.

History of Innovation**Scientific Expertise****Global Footprint****Sustainable Solutions**

At Roche, **everything we do must meet the current and future needs of patients**. Since 1968, Roche has been committed to **delivering innovative diagnostics solutions**, with a proud history at the forefront of infectious diseases (ID).¹ We **pioneered polymerase chain reaction (PCR)**.¹ From the first real-time PCR instrument to the **first compact real-time PCR system** for on-demand ID testing at the point of care with **cobas® liat® System**. We redefined what is possible with the automation and consolidation of ID diagnostics with the **first high-throughput, fully automated sample-to-results system** with our **cobas® 6800 and 8800 Systems**. And, from delivering the **first commercially available HIV assay**¹ to innovative assays for Hepatitis C and HIV that can **simultaneously detect antigen and antibodies**, we continue to expand what can be achieved from a single test.

We remain a leader in *in vitro* diagnostics (IVD), trusted by customers around the globe, with **over 29 billion tests completed in 2022**.² Our patient-centric approach continues to focus on expanding our extensive portfolio of trusted and flexible ID diagnostics solutions, from **immunochemistry, molecular and blood safety solutions, as well as point of care and lateral flow tests**, to empower our partners to maximise their medical value and meet the needs of patients today and in the future.

Labs are struggling with everything from dealing with multiple suppliers to complex, fragmented and unreliable solutions, and irregular supply chains. They need a trusted and experienced partner with the scientific expertise to deliver a comprehensive portfolio of solutions capable of meeting their needs.

History of Innovation**Scientific Expertise****Global Footprint****Sustainable Solutions**

With the **best scientists and continuous commitment to investment ID**, we have built our organisation around always **striving to meet our customers' needs and improve patient care**. Everything we do is rooted in science, collaborating with academic institutions, governments, and policymakers around the world to ensure all our solutions are robust, efficient and effective. We were one of the first companies to **recognise the importance of external collaboration**, partnering for more than 20 years with companies and research institutes worldwide and supporting Investigator Initiated Studies (IIS) to enhance understanding and application of our solutions and further their benefit to patients.

Staying ahead of an ever-shifting ID landscape requires agility and expertise. We have continuously **improved the synergies between our Pharmaceutical and Diagnostics divisions**, allowing them to share research facilities, technologies and discoveries for a unique development process that drives innovation and better solutions. We support all our R&D teams with the autonomy and resources to innovate, **investing 14 billion CHF in 2022** to discover the best solutions to meet the unmet needs of our customers and patients.

Post-sales support

Global Outlook

From innovative diagnostics solutions to data-powered insights, **we support and advise our customers every step of the way.**¹ Our technical consultants **get to know each customer's specific testing requirements**, workflows, and physical space. That way, we can **co-create a configuration** that optimises resources, accelerates turnaround times and maximises the use of floor space for a future-ready solution capable of driving growth, all while ensuring our customers can deliver the highest possible medical value.

Our healthcare consultants work with our customers to recognise opportunities to integrate data and resources at all levels of their organisation, not just in the lab. Our years of experience have taught us the nuances of the diagnostic landscape, so we can **go beyond surface-level improvements to provide deeper insights** that optimise performance, add value and respond to ever-changing health policies and economics to improve patient and business outcomes.

Global Outlook

[Position 1] We are committed to supporting governments in building strong and resilient healthcare systems by improving access to quality diagnostics. In 2014, Roche launched the **Global Access Program** to enable access to reliable testing solutions for patients in low- and low-middle-income countries (LMIC).⁴ We **collaborate with international agencies, non-governmental organisations and governments at the global and local levels to improve health system diagnostic capacity.** Our range of solutions includes disease awareness and education programmes, healthcare worker training, lab efficiency consulting and digital solutions to help **create scalable and sustainable solutions for laboratories, healthcare professionals, and patients no matter where they live.**

In 2022, we joined forces with the **Global Fund** to improve the diagnosis of HIV and TB for patients in LMIC by building local capacity to **tackle fundamental infrastructure challenges – from increasing capacity and improving pandemic preparedness to supporting the establishment of affordable, effective, sustainable management of healthcare waste.**⁵ Through collaboration with the Global Fund, Ministries of Health and country-based partners, our ambition is to support assessments and implementation of new technologies and knowledge transfer in 10 countries over the next five years.

Between 60-70% of medical decisions are based on in vitro diagnostic test results.¹ Despite diagnostics being crucial to combating ID, the landscape is becoming increasingly complex, with tighter budgets, rising workloads, staff pressures, and increased competition forcing labs to do more with less.

Patient Value —**Operational Value** +**Investment & Future Value** +

Patients are at the heart of everything that we do. Our comprehensive infectious diseases portfolio of **over 65 assays is designed to meet the needs of patients affected by diseases with the greatest global impact**, ranging from hepatitis, sexual health and respiratory infections to vector-borne diseases. From a rapid and accurate diagnosis to guiding treatment or evaluating immunity, our assays help provide actionable insights along the entire treatment journey so that **we can help patients get the right treatment at the right time.**

We're paving the way for a new standard of care. Our cutting-edge automation and integration streamline workflows, increase throughput and accelerate turnaround times that ensure rapid and accurate results so **patients get the right treatment as soon as possible to improve disease management and drive better outcomes.** With solutions ranging from the lab to point-of-care and lateral flow tests, we ensure that **patients can access fast and reliable results along the entire continuum of care.**

Our innovations also account for the needs of providers, payers and all other stakeholders. We understand that fast, accurate diagnostics not only improve patient care but are crucial to **delivering better public health outcomes.** From shortening hospital stays to reducing costs of mistreatment and preventing transmission, **our diagnostic solutions help build more robust, efficient and sustainable healthcare systems and improve the health of society as a whole.**

Patient Value**Operational Value****Investment & Future Value**

Our holistic view of value goes beyond simply supplying tests. **We focus on delivering solutions that meet our customer's needs and maximise their return on investment** day after day, optimising workflow, speeding up turnaround times, and freeing up staff. We provide a **range of options that meet the needs across all settings and at all levels of throughput**, from integrated and automated serology and molecular lab testing, to point-of-care solutions that enable rapid testing at the point of need. Our platform options provide the **flexibility to scale throughput and testing capabilities to increase value and access new market opportunities**. While our cutting-edge automation handles those time-consuming, mundane manual tasks, our pioneering integration of serology and molecular workflows **frees up skilled staff to dedicate more time to high-value tasks and collaborating with clinicians to improve patient care**.

We work closely with each customer, from selecting the configuration that unlocks untapped medical value to supporting them to overcome their organisational challenges, ultimately **driving better outcomes for both business and patients**.

Patient Value

Operational Value

Investment & Future Value —

We are driven by a patient-centric mindset that concentrates our innovation on solutions that **maximise medical value and improve patients' experience of ID testing**. We're here for patients wherever they need us. Our comprehensive menu of assays and solutions spans nearly the entire spectrum of routine testing – from the lab to the point of care and lateral flow tests – meaning our **patients can get fast, accurate results in almost any setting**. Our cutting-edge automation speeds up turnaround times so **patients get rapid results and the right care as soon as possible, in order for clinicians to improve disease management and drive better outcomes**. Our integrated serology and molecular testing enables confirmatory reflex testing from a single specimen, so clinicians and **patients get a comprehensive diagnostic picture with fewer visits and without the stress and pain of redraws and secondary tests**.

**Improved Patient
Experience**

With over 65 high-sensitivity and specificity ID assays, ranging from core diseases (like HIV, hepatitis and TB) to regional-specific diseases (like West Nile virus, dengue and Zika), our comprehensive portfolio is designed to **ensure patients across the globe can access a fast, reliable test for the disease that's specific to their needs.**

Better Patient Care

Our assays focus on delivering high medical value that helps clinicians make more informed decisions and improves **patient care when they are needed most.** We support antimicrobial stewardship and the appropriate use of antibiotics by **rapidly identifying causative pathogens, detecting antibiotic resistance, and providing clear signals for antibiotic starts and stops.** Our respiratory pathogen panel can **identify 20 of the most common viruses and bacteria that cause upper respiratory illness in about 90 minutes¹,** while our **cobas[®] liat[®] solution can rule-in or rule-out SARS-CoV-2 & Influenza right at the point of care in only 20 minutes².** Our ToRCH testing solutions help rapidly and reliably identify congenital infections, while our Elecsys[®] Cytomegalovirus and Toxoplasmosis antibody **avidity assays provide vital information on time since infection to help manage the risks of congenital transmission in pregnant patients.³**

We're always looking to what patients need next. That's why we continue to **support and expand our extensive assay pipeline and develop new and innovative platforms.** Over the next decade, we **will rapidly expand our POC ID portfolio to double access** to high medical value solutions at the point of care. So we can give more patients and clinicians access to the diagnostics they need when they need it.

Better Patient Care

Global Access

[Position 2] Almost half of the world's population has no or limited access to diagnostics.¹ Therefore, our scientific expertise and innovation in ID diagnostics must support all patients – no matter where they live. The Roche Global Access Program aims to expand access to quality, sustainable diagnostic testing for patients in LMIC and assists in establishing sustainable, national elimination programmes that meet World Health Organisation (WHO) disease elimination goals.² We have supported patients across the globe, delivered widespread HIV, hepatitis and TB testing and cervical cancer screening throughout Africa, and contributed to the global management of COVID-19.

Responsiveness**Unmet need:**

Labs at all levels of throughput can struggle to cope with the pressure to deliver high-quality, timely results, and from an ever-increasing number of complex assays, all while managing with increasingly fewer staff.

Systems Portfolio**Automation, Consolidation
& Integration****Digital Integration**

We boost efficiency in centralised and decentralised settings. Within the lab, our cutting-edge end-to-end automation **helps prevent contamination¹ and tackles time-consuming and error-prone manual tasks**, from pre- and post-analytics to seamlessly connecting different instruments, ensuring **accurate and reliable results while accelerating turnaround times that free up staff time and expertise**. While our point-of-care systems, capable of a fully automated PCR process that delivers accurate results in 20 minutes or less², and lateral flow tests **make ID testing more accessible to patients wherever they are**.

We are the pioneers of lab consolidation and integration, breaking down the barriers between and within labs for streamlined and simplified workflows. We fully integrated clinical chemistry and immunochemistry onto a single platform with **our serum work area (SWA)**. We automated nearly the entire molecular workflow with the **molecular work area (MWA)**. Our commitment extends beyond individual disciplines as we continually push what is possible within a single platform by **combining serology and molecular testing into an all-inclusive solution for fully-integrated and automated ID testing for clinical and blood screening labs**.

Digital Integration

True integration means more than simple connectivity. We harness the power of data with purpose-built digital solutions that can **securely integrate data from lab and point-of-care solutions.** From providing actionable insight to help simplify laboratory processes and workflow to enabling real-time monitoring of lab performance, our **digital solutions provide the detailed operational analytics needed to guide better outcomes.**

Labs always need to be ready to respond to a sudden ID landscape that can rapidly shift. Our customers need a partner they can trust and who has expertise and experience from fighting past global health threats, to ensure they are ready to navigate any future crises.

Outbreak Expertise (1)**Outbreak Expertise (2)****COVID-19 Solutions****COVID-19 Response &
Infrastructure**

Over the last three decades, Roche has been on the front lines of outbreaks. In 1998, **Roche founded the Global Surveillance Program** to monitor changes to the HIV genome, but now **monitors the genetic sequences of many diseases**, ranging from viral pathogens like influenza and hepatitis to bacterial pathogens like *Mycobacterium tuberculosis* (MTB) and methicillin-resistant *Staphylococcus aureus* (MRSA). The programme is relied upon by researchers, physicians and patients worldwide and **remains a vital tool to improve the reliability of our assays and to monitor new and emerging threats so that we're ready to rapidly respond** with innovative solutions as soon as possible.¹

In 2014, as Ebola spread to thousands in west Africa and reached patients in the UK and the US, **we rapidly developed, under an emergency use authorisation (EUA), an easy-to-use molecular diagnostic test in whole blood samples** for rapid virus detection.¹

In 2016, as Zika began spreading rapidly, we worked closely with agencies in Puerto Rico and the US to **rapidly develop an *in vitro* nucleic acid screening test capable of directly detecting the Zika virus RNA in plasma from blood donors**, ensuring patients received the safest blood products possible. We continue to innovate, **launching the first fully automated Zika antibody assay.** By leveraging our Elecsys technology, **we were able to rapidly develop an assay with the high specificity needed to cross-react with other viruses.** This ensures that clinicians and patients, particularly expectant mothers, can make more informed choices **through access to fast, reliable, and accurate results on a potential recent Zika infection.**¹

Babesiosis is a tick-borne illness from the Babesia parasite. **It can be life-threatening**, especially among the elderly and immunocompromised, but **it can't be detected through traditional plasma or serum samples.** In 2019, we created the first **high-throughput nucleic acid screening method capable of detecting all four of the common Babesia species in whole blood samples** to help protect the global blood supply from this disease.¹

Outbreak Expertise (1)**Outbreak Expertise (2)****COVID-19 Solutions****COVID-19 Response &
Infrastructure**

Declared a pandemic by the WHO in March 2020², **COVID-19 represented an unprecedented global health crisis that demanded a global response**. Roche worked with urgency, passion and purpose each and every day, leveraging our decades of innovation and research to rapidly **deliver 13 high-quality assays to the market in only 12 months**.³ We have continued to expand our portfolio to over 20 COVID-19 assays ranging from serological and molecular assays to point-of-care and lateral flow tests to ensure patients, clinicians, and policymakers have the vital diagnostic tools they need to navigate the pandemic.³ Our investment in increased production and scaling up infrastructure enabled **1.2 billion COVID-19 tests to be completed using one of our assays to date**.⁴

In 2022, as Monkeypox was declared a public health emergency by the WHO, **we delivered a Emergency Use Authorization (EUA) high-throughput automated test to detect the monkeypox virus with an innovative dual-target approach that ensures detection even if mutations occur**.¹ With swift action, patients could get an accurate diagnosis and appropriate treatment as soon as possible while avoiding unnecessary testing or isolation.

We continue to drive research so that all of society is better able to navigate future outbreaks. In 2022, Roche, in partnership with Ludwig-Maximilians-Universität (LMU) and the Fraunhofer-Gesellschaft, **opened a new centre dedicated to identifying and characterising pandemic pathogens** to develop new diagnostics and therapies and to better understand the role of the immune system in ID.

By leveraging our extensive experience, scientific expertise, and innovative diagnostic solutions, **we are always ready to respond and support labs**

COVID-19 Response &
Infrastructure

The COVID-19 pandemic needed a rapid response. And we were prepared to rise to the challenge. But that preparedness didn't happen overnight. It was the **culmination of our past experiences in fighting outbreaks and our scientific expertise** and innovative technology. **We brought 13 assays to the market in only 12 months**, including one of the first laboratory developed tests (LDT) in collaboration with TIB Molbiol as well as the first IVD SARS-CoV-2 PCR test, a high-performance serology test in just 42 days.¹ With **over 20 COVID-19 assays covering the entire patient journey** from detecting infection to assessing long-term immunity, we help **public, healthcare professionals and governments to have the right tools to make informed decisions** throughout the pandemic.

COVID-19 Solutions

COVID-19 Response &
Infrastructure

The COVID-19 pandemic needed reliability and experience. Our robust supply chain enabled us to ramp up production to meet the rapid increase in demand. Since 2020, Roche has invested **664 million CHF in expanding our production capacity, including over 100 new manufacturing lines for consumables, reagents and raw materials, and a brand new manufacturing space** for instruments alongside four major facility expansions. Since the start of the pandemic, **1.2 billion COVID-19 tests have been completed using one of the assays** from our diverse portfolio.¹

We are committed to maintaining the momentum of our pandemic response. It can serve as the foundation for a more robust and accessible ID testing infrastructure, with the opportunity to redeploy testing for better screening and prevention of other IDs and **strengthen our ability to fight against ID globally.**
