

Shining the light on infectious diseases

Eradicating infectious diseases together

This was said in 2003 –
imagine where we are now....

“Infectious diseases are the world's greatest killers, accounting for more than 13 million deaths annually among children and young adults alone. Most deaths from infectious diseases occur in developing countries, where they account for half of all deaths.”

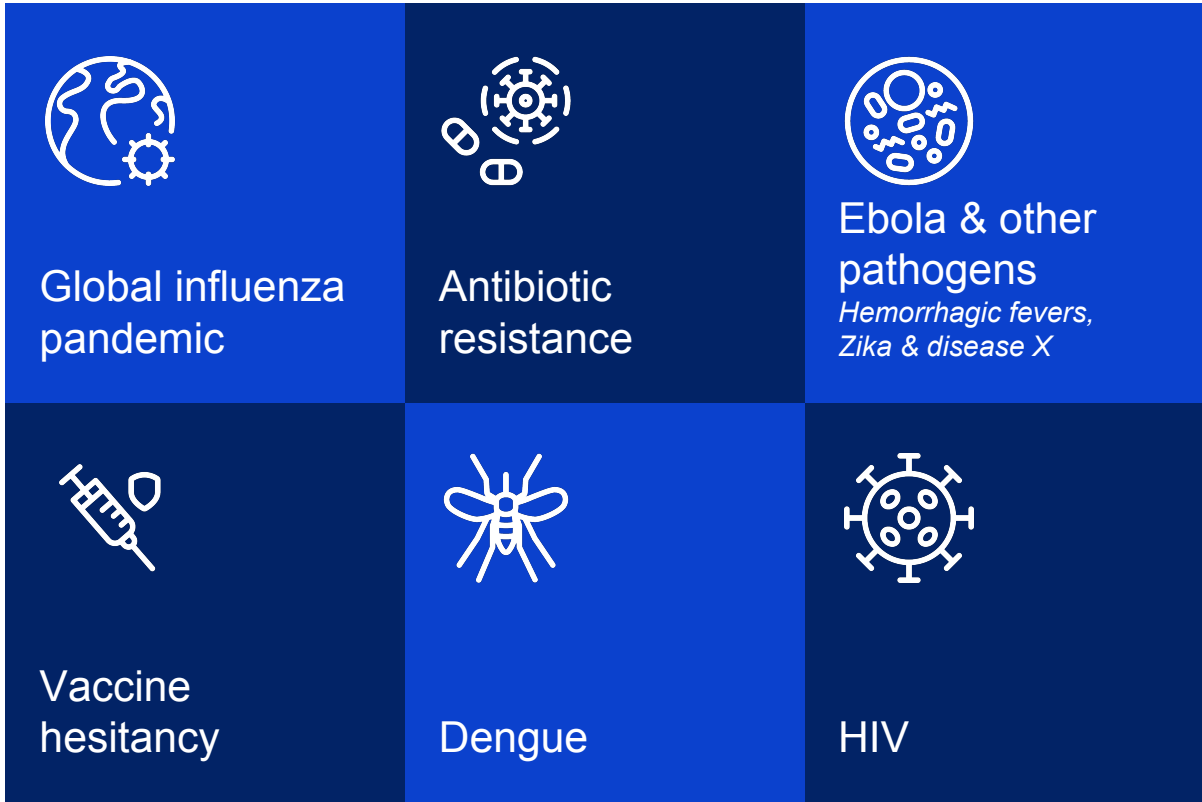

Institute of Medicine (US). Informing the Future: Critical Issues in Health: Second Edition. Washington (DC): National Academies Press (US); 2003. GLOBAL HEALTH AND INFECTIOUS DISEASE. Available from: <https://www.ncbi.nlm.nih.gov/books/NBK216159/>. Accessed 25 September 2025

Six out of ten threats to global health in 2019 were ID-related

As defined by the WHO (without taking COVID-19 into account)

Top ten global health threats in 2019

6 out of 10
are ID-related

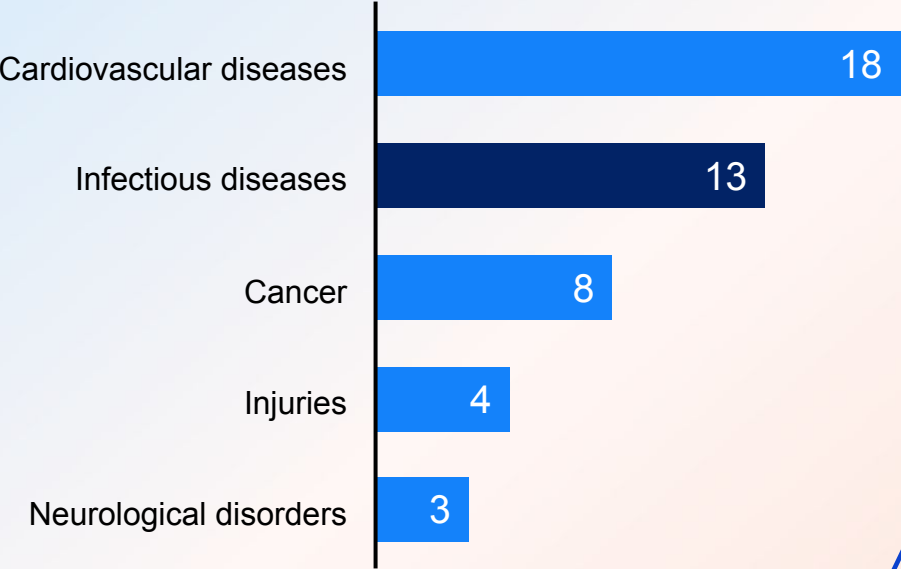

Source: World Health Organization. Ten threats to global health in 2019. Available from: <https://www.who.int/news-room/spotlight/ten-threats-to-global-health-in-2019>. Accessed 25 September 2025

Major global health and economic burden

People and health systems globally are significantly impacted by Infectious Diseases

Cause of death globally (millions per year)

Economic Burden

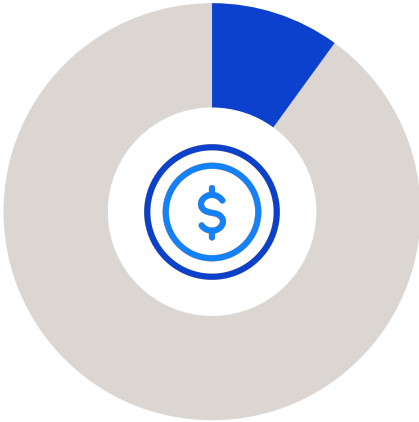

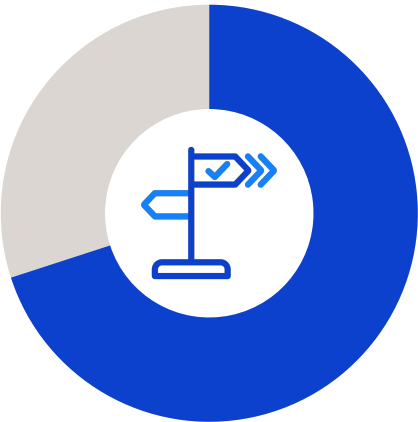

Eight major diseases (HIV/AIDS, malaria, measles, hepatitis, dengue fever, rabies, tuberculosis and yellow fever): up to **US\$8 trillion** with more than **156 million life years lost** for the year 2016 alone

COVID-19: US\$8 trillion in just 2 years

Investing in diagnostics is a valuable reality

Shifting mindsets from “spending” to “investing”

Diagnostics accounts for 70% of clinical decision-making

Yet diagnostic IVD is only 10% of the global pharmaceutical market is for Diagnostic IVD

Sources: Beastall GH. Clin Chem Lab Med. 2013;51(1):221-7.
 Fleming KA, et al. Lancet. 2021;398(10315):1997-2050.

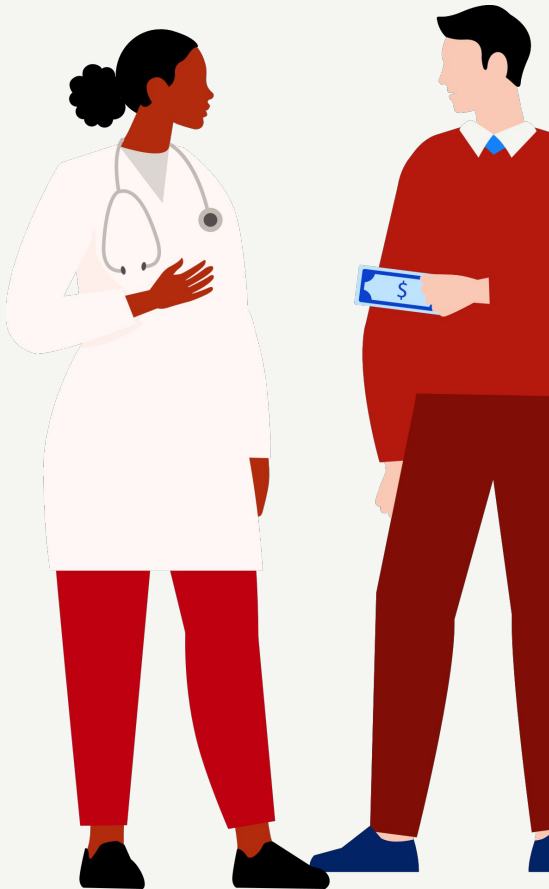

Investing an extra dollar in diagnostics would have a return of:

Multidrug resistant TB	\$2.90
Hep B in pregnant women	\$3.00
Syphilis in pregnant women	\$8.60
HIV	\$16.60
TB	\$24.40

1.1 million deaths prevented

Protecting your future now with our social strategy

Joining together to create a better tomorrow for everyone

Increasing access to innovations, helping more people have access to solutions so they can live longer, better lives.

Developing more innovative, more efficient diagnostic technology and methodologies for improved patient management.

Prioritizing safety and health, and promoting diversity, inclusion and equal opportunities internally and along the supply chain.

We contribute to a better society by supporting the **right treatment** for the **right patient** at the **right time**.

Partnership and support

Partnership and support

Your trusted partner of choice

Roche 360° Service Solutions

We care about you and your needs at every step

- Global expertise in local lab design
- Continuous improvement
- Optimized productivity and reliability
- Effective 'GoLive' management
- Tailor-made, high-quality training

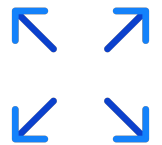

Partnership and support

Roche Healthcare Consulting

Innovation based on your needs

Co-creating and optimizing the future of labs

Broadest and most flexible lab solutions

Unmatched possibilities through experience

True integration

Within the lab and beyond through digital solutions

Enabling greater results for your entire organization

Roche's consultancy partnership can help enable your laboratory organization provide the best outcomes

It starts with 250 experienced consultants worldwide who are certified lean, six sigma, change management experts, have cross functional expertise and are data analysis experts.

An agent for change that guides and provides direction by integrating information, insights, resources and people to help enable best healthcare outcomes.

Global Access Program - Increasing access to our innovations

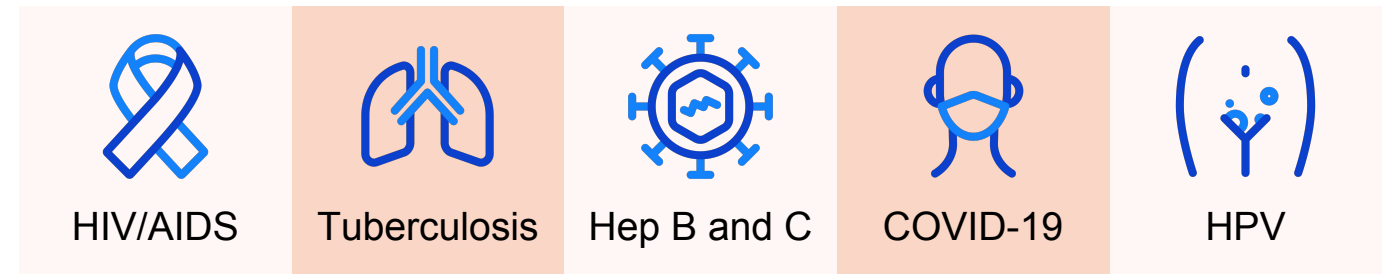

Enabling access to reliable testing solutions for everyone everywhere

2014

Recognizing that diagnostics is an integral component for functioning health systems, Roche launched the Global Access Program to enable access to reliable testing solutions for patients in low- and low-middle income countries (LMICs).

Our goal is to use innovative solutions and leverage world-class expertise to establish diagnostics as a frontline defence against diseases such as:

Our range of solutions includes:

- Disease awareness and education programs,
- Healthcare worker training
- Lab efficiency consulting
- Digital solutions

Your success is our priority

Which is why we aim to continually deliver exceptional service for you

Roche placed first on the customer loyalty index in a customer satisfaction survey across all high-performance brands in the IVD sector.

A double-blind questionnaire on service, indicated significant customer satisfaction amongst current Roche customers particularly when compared to competitors*.

* Roche Diagnostics commissioned Homburg & Partner to perform an anonymous service benchmarking survey of leading clinical diagnostic laboratories globally. Roche Diagnostics as the study sponsor was not disclosed at any time. Interviews and performance results were surveyed in a neutral setting. Source: Hamburg & Partner. Service Satisfaction Market Survey 2020. Countries included: USA, Germany, China, Brazil, UL. Average score of vendors included.

	Roche	Competition

Patient centricity

Improving the patient experience

Transforming lives by preventing, diagnosing, treating and monitoring disease

Diagnostics have transformed the way diseases can be prevented, diagnosed, treated, and monitored.

With patient-centric mindset we are innovating solutions for any setting so that patients can get right care as soon as possible.

Access to diagnostics is a global priority but this ambition is not being met due to lack of funding and innovation.

“Continuing to provide check-ups even during a pandemic is essential, as people depend on early diagnosis and rapid access to therapy to achieve the best possible results”.

Thomas Schinecker, Chief Executive Officer Roche Group

Putting the patient first

Better patient care

Our assays focus on delivering high medical value that helps clinicians make more informed decisions and improves patient care with the right treatment at the right time

Our respiratory pathogen panel can identify 20 of the most common viruses and bacteria that cause upper respiratory illness in about 90 minutes

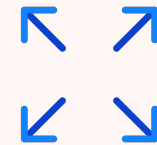

cobas® **liat** solution can rule-in or rule-out SARS-CoV-2 & Influenza right at the point of care in only 20 minutes

Our ToRCH testing solutions help rapidly and reliably identify congenital infections

Elecsys® Cytomegalovirus and Toxoplasmosis antibody avidity assays provide vital information to help manage the risks of congenital transmission in pregnant patients

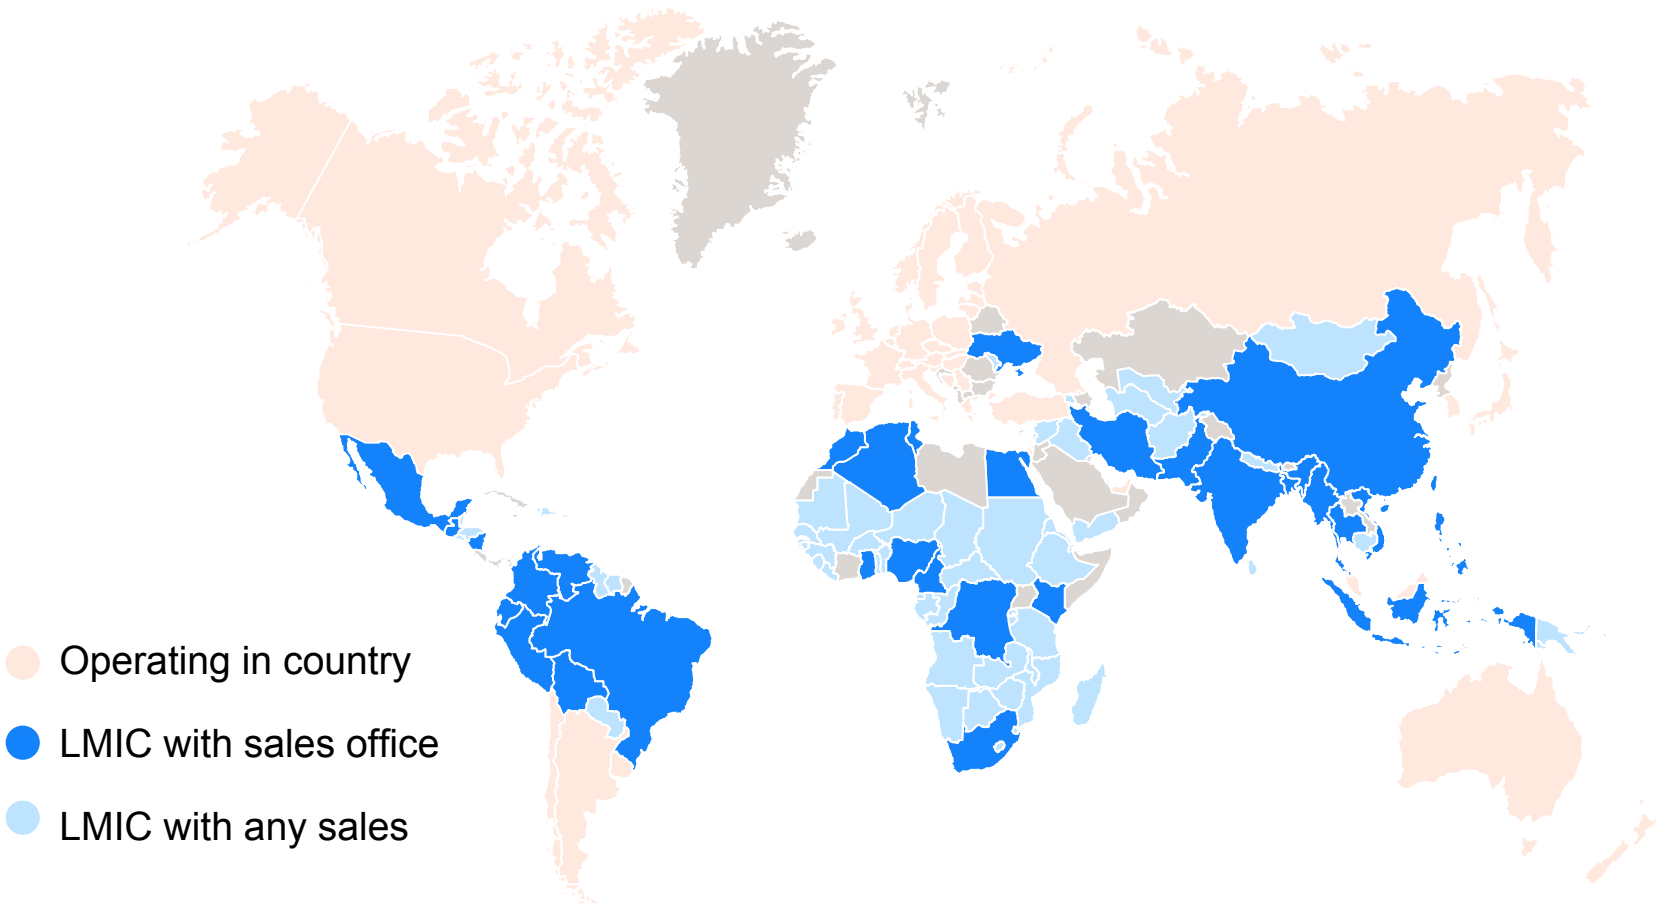

The future →

Over the next decade, we will rapidly expand our POC ID portfolio to double access to high medical value solutions at the point of care. So, we can give more patients and clinicians access to the diagnostics they need when they need it.

Leveraging innovation globally

Access for all patients everywhere when they need it most

Roche offers accurate and high quality healthcare solutions in over 150 countries with over 88,000 people working together for you.

Our contribution to COVID-19

Demonstrating the value of diagnostics

Meaningful progress

Roche delivered with the highest level of urgency leading to the 1st IVD SARS-CoV-2 PCR test, high quality serology test in 42 days, and a rapid antigen test portfolio to pave the way in many countries.

Strong partnerships

With the communities and governments, we helped build infrastructure (labs and training), and improve access in many countries where PCR labs were not as common. As a strategic partner with Moderna, we were able to complement vaccine studies.

More than 22 COVID-19 tests quickly developed

In less than 12 months, we created a portfolio of 13 tests and solutions for COVID-19, an entirely new disease. Our tests were developed to feature high sensitivity and high specificity. Continuous COVID-19 solutions have been innovated for improved disease management.

>67 million COVID-19 tests enabled per month*

Our COVID-19 products aid in the diagnosis of active SARS-CoV-2 infections or measure related antibodies since the pandemic outbreak in 2020. We also produced millions of tests for blood gas analysis (55 million) and sepsis management (53 million), which also played a vital role in the fight against COVID-19.
